Koopmans, Tjalling C., and Stanley Reiter, "A Model of Transportation," in Koopmans(ed) ACTIVITY ANALYSIS OF PRODUCTION & ALLOCATION, John Wiley & Sons, NY, 1951. This is the original "transportation model" evidently. It deals with scheduling empty movements of ocean shipping. (Thus, again, takes as given locations as points, and fixed roadway as freely given. It may well be this water transport model, inherited from a past centered around the North & Mediterranean Seas, that has kept economic analysis from hitting on the effect of vacant space on transportation costs.)

------ "Optimum Utklization of the Transportation System." Cowles Commission Paper, New Series, No. 34., possible effects of mc rate making on industrial location.
