Industry Location

Black, H., "Detroit: a Case Study
in Industrial Problems of a
Central City

in Land Econ. 34(3): 219-226
of Aug 1958

poll of 4,000 industrial firms within
Central Detroit revealed that
23.1% nearly 1000 would prefer
to be located outside the city. of
that number 10.9% had already
made plans to relocate in the
fringe.

Reasons given for the move
included in order of frequency:

(1) lower ~~tax~~ taxes in the
fringe (2) more space (3) better
parking facilities (4) labor
considerations

Milwaukee County Historical Society
Area Research Center
Citizens' Governmental Research Bureau

~~MU lib.~~

University of Wisconsin--Milwaukee Library

This library consists of the main collection at 2500 East Kenwood Boulevard, and the downtown library collection at 600 East Kilbourn Avenue. The collections reflect the various courses given on the respective campuses of UW-M.

The rapidly growing collection of 170,000 volumes includes 2,000 periodicals and some 25 daily newspapers. In addition to printed materials, an excellent microfilm and microcard collection with appropriate viewers is maintained at the Kenwood library. The library became a depository for United States Government documents in 1960, and acquisition of back issues of selected materials is under way.

A close working relationship is maintained with the Marquette University Library, also in Milwaukee. There are many industrial and other special libraries in the community which provide considerable material in particular disciplines.

Milwaukee Public Library

An excellent general library of more than a million and a half volumes, this depository is two blocks from the downtown campus library. It has a large collection of English-language works in the social studies published since the 1880's, and as a United States Government depository it has all federal documents since 1952. It

is especially strong in biography, has the complete works of many authorities in political science and owns long runs of nineteenth-century British magazines. It holds good collections in Wisconsin, Milwaukee, and Great Lakes marine history, and the papers of several Milwaukee socialist leaders. Its newspaper files include microfilm of most major Milwaukee newspapers.

Milwaukee Municipal Reference Library

Begun more than 50 years ago, this is a specialized collection on municipal activities, located in the city hall. Its materials include extensive information on metropolitan area problems and government in Milwaukee and elsewhere, and reports, studies, and documents on public administration. Its services include a record management and archives program for the orderly disposal or preservation of city records. The archives of the city and of its agencies are also maintained in the city hall.

Milwaukee County Law Library

This is an excellent legal library maintained for the courts of Milwaukee County. In addition to legal works, reports and materials on county government are deposited here. Its resources are available to students and faculty.

Milwaukee County Historical Society

The Society has manuscript collections including the records of the Socialist Parties of Milwaukee and Wisconsin and the Farmer-Labor-Progressive Federation, and papers of former mayors of Milwaukee and many other Milwaukeeans prominent in local and national life.

Area Research Center

The Center permits the use in Milwaukee of manuscripts on deposit in the State Historical Society at Madison for a period of ninety days. The Society and the University of Wisconsin--Milwaukee Library are also developing the Center as a depository for archival and manuscript materials from Milwaukee and adjacent counties.

Citizens' Governmental Research Bureau

The Bureau is a research organization supported by voluntary funds. Its files are open to graduate students and provide materials on urban, suburban and metropolitan government including factual studies on local government revenues, expenditures and debts, school revenues, budgets, pensions and many other topics.

II. COMPUTER CENTER

The Center has at present an IBM 1620 Model 2 computer, with a high-speed card reader and punch, and 60,000 decimal digits of magnetic core storage. By 1965, magnetic disk storage will be added to the 1620 computer, and an additional computer - the IBM 1401 - will be installed. Auxiliary punched card machines, including tabulator, sorters, key punches, and reproducer, are part of the Center's equipment.

The Center is designed to serve the University for all computing and data processing needs - educational, research and administrative. Time on the machines may be requested by anyone associated with the University.

A variety of standard programs and programming languages is maintained in the Center program library to serve the needs of classes and researchers in the physical, natural and social sciences.

The staff of the Center includes personnel available for consultation on the formulation for the computer of problems related to all phases of social studies and natural sciences.

III. SCHOOL AND DEPARTMENTAL FACILITIES

Anthropology
Commerce
Geography
Psychology
Social Work
Urban Affairs

Anthropology

Milwaukee Public Museum. The full facilities and resources of the Museum are available to graduate students in anthropology. The fourth largest natural history museum in the United States, the Museum is housed in a new building which incorporates the most recent advances in museology. It contains three floors of approximately 150,000 square feet of exhibit space as well as laboratories, classrooms, lecture halls, audio-visual center and television studio. The reference library provides an excellent basic collection of anthropological literature. The collections of the Museum are particularly strong in materials from the Northwest Coast, California and Woodland Indian areas, West Africa, Peru, Oceania and Middle America.

Milwaukee Municipal Zoo. The Zoo has a large and representative colony of the lower primates and specimens of most of the higher primates as well. The primate collection is available to graduate students interested in physical anthropology and primatology.

Commerce

Research facilities of the Commerce Division include research rooms and electric calculating equipment, and access to the computer equipment which the School of Commerce at Madison administers with the Registrar's office. Reference library materials include recurrently updated series of tabulated and charted economic and business data,

operating and financial data related to some 50 distinct fields of business, digests of Wisconsin and Federal legislation relating to trade, regulation of business enterprise, etc., and corporation reports and related documents. As a federal depository, the University Library contains all official documents and publications of the federal regulatory agencies, including the Federal Power Commission, the Federal Trade Commission, the Interstate Commerce Commission, and the Securities and Exchange Commission, as well as materials of the Internal Revenue Service and the Bureau of the Census.

Geography

Map Library. This library contains large sets of topographic maps of foreign countries and the United States, and a large number of special maps portraying economic, ethnic and political conditions. The library is a repository for the Army Map Service and the United States Geological Survey from which about 1,500 new maps are received each year.

Air Photos. The Soil Conservation Service of the U.S. Department of Agriculture at its Milwaukee office maintains an extensive file of negatives of air photos for a nine-state area in the midwest. Prints from these negatives are available for research studies.

Cartographic Service. The department provides cartographic service for making of maps for research papers and theses.

Psychology

Research facilities include laboratories for experimental work with animal, child and adult subjects. The animal and physiological laboratories include air conditioned housing for rats and pigeons, electrically shielded rooms, rat stereotaxic equipment, and specialized

SEWRPC

recording, stimulus presentation, and control equipment for research in operant conditioning, animal motivation and physiological psychology. There is a psychogenetics laboratory with mice as subjects. Facilities for human research include an eyelid conditioning laboratory, a laboratory for operant conditioning and motivational studies with children, and space for experimental research in verbal learning, personality and social psychology. Research and teaching assistantships, and graduate scholarships and fellowships are available to a certain number of full-time students.

Social Work

The School of Social Work makes extensive use of the health, recreational and welfare facilities of many public and private services. Students are placed for their clinical training in more than 30 different agencies, for example the Family Service Association, Curative Workshop, School for Boys (Wales), Milwaukee County Children's Court, Milwaukee City Mental Health Center, Boys Club of Milwaukee, Neighborhood House, Wisconsin Division of Corrections, and United Community Services.

The School also works with the resources of the community in research. It has available the extensive facilities of the Milwaukee Public Library, the Wisconsin Department of Public Welfare and the State Historical Society. These facilities, combined with the facilities of the Survey Research Center and the research laboratory of the School, provide unusual opportunity for professional training and research in social work and social welfare.

Urban Affairs

Ready access to municipal, regional and state library and planning facilities provides opportunities for research and study in urban affairs. For example, the Southeastern Wisconsin Regional Planning Commission is accumulating data about physical, social and economic characteristics of southeastern Wisconsin, including land use, travel patterns, natural resources and soil conditions. The Milwaukee Department of City Development maintains a library containing works on planning, housing and redevelopment, publications of planning departments in other cities, and local demographic and housing data. Libraries listed in Section I above are invaluable resources.
